BARRIERS AND FACILITATORS TO SPINAL CORD INJURY RESEARCH

A survey of the international clinical research community

Study objectives

- Identify **barriers and facilitators** to international spinal cord injury (SCI) research.
- Identify **initiatives** that will facilitate international SCI research.
- Provide a baseline to **evaluate** future initiatives to enhance international SCI research.

How it will make a difference

The goal of the study is to identify and implement initiatives supported by SCI organizations to enhance international collaborations and ultimately, improve care and lead to future cure(s) for persons living with SCI.

Learn more

Visit www.mustel-surveys.com/SCICollaborationSurvey for more information and to access the online survey. Your participation in the survey will be confidential and anonymous.

Participants will be entered into a draw to win one of three \$25 gift cards.

Tell us how we can get the most out of international spinal cord injury research collaborations.
